

Case management that *guides*, not gates.

A modern, security-hardened case-management system for refugee resettlement and other frontline nonprofits — the category of tool that used to sit behind a six-figure contract, rebuilt to be free.

Lighthouse Nonprofit Technologies · github.com/Lighthouse-Nonprofit/caselight

Screens show synthetic demo data only

Compliance shouldn't sit behind big money.

The organizations serving refugees, survivors, and resettling families hold some of the most sensitive data that exists — and the software built to protect it is priced for hospitals and agencies, not for a team of five. CaseLight is that same class of tool, hardened to U.S. government control baselines, given away so a nonprofit's budget stops deciding the safety of its clients' records.

THE CONTROLS

Gov-grade

Hardened toward NIST 800-53 Moderate & SOC 2 (Security, Confidentiality, Privacy) — at the application layer, with evidence written down.

THE PRICE

\$0, forever

Free & open source under AGPL-3.0. No seats, no per-client fees, no lock-in.

THE OWNERSHIP

Your box, your data

Self-hosted and multi-tenant. Your records stay on infrastructure you control; the source stays yours.

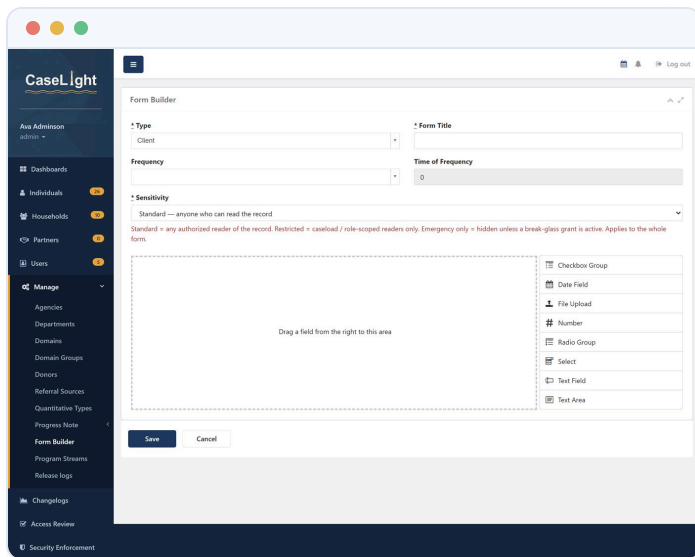

Everything a caseload needs.

HOUSEHOLDS & INDIVIDUALS

The whole family, in one place.

Every person sits inside a household, one click from its members — with assigned case managers, referral source, status, and program tags on every record.

The screenshot displays the CaseLight web application. On the left is a dark sidebar with navigation links: Dashboards, Individuals, Households, Partners, Users, Manage, Change logs, Access Review, and Security Enforcement. The main content area shows a profile for 'Yusuf Hassan' (Active). At the top, there are tabs for 'Open Resettlement Cases', 'Tasks', 'Assessments', 'Case Notes', 'Additional Forms', 'Add Form', 'Enrolled Program Streams', and 'Program Streams'. Below these are fields for 'HOUSEHOLD' (123 Olive St, San Luis Obispo, CA 93401), 'PERSONAL NAME', 'PERSONAL EMAIL', 'PERSONAL PHONE', 'PERSONAL ADDRESS', and 'PERSONAL STATUS' (Accepted). A 'Resettlement Case' section includes fields for 'Intake Date' (June 21, 2026), 'Household' (Hassan Family (DEMO)), 'Case Manager' (Dev Admin, Web Worker), and 'Status' (Active). At the bottom, there is a section for 'Enrolled programs'.

CONFIGURE WITHOUT CODE

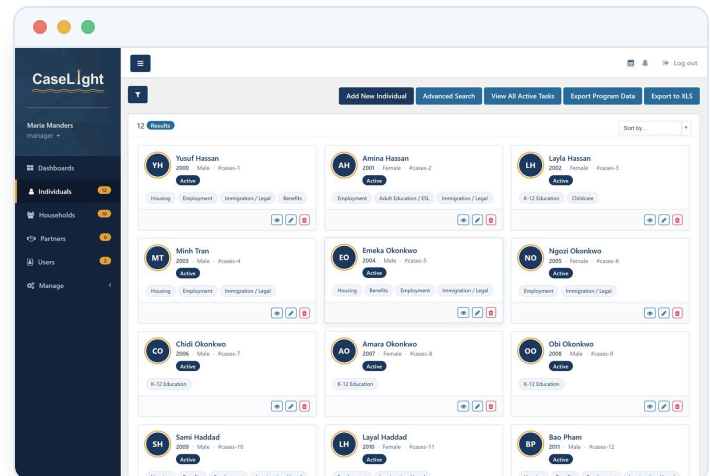

Add a field. Spin up a program.

Custom forms, enrollable program streams, and structured assessments are built and edited in-app with a drag-and-drop builder — and each carries an explicit sensitivity. No developer, no migration.

ROLE-AWARE

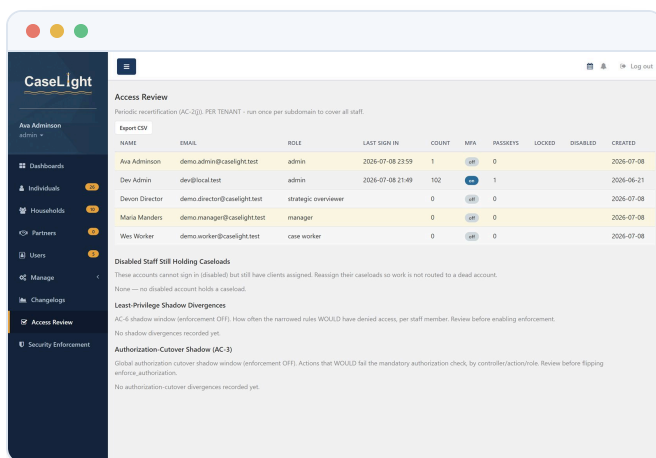

Shown the way each person works.

Administrators and directors get a dense roster; managers and case workers get cards scoped to their own caseload. A shared calendar keeps appointments and milestones on track.

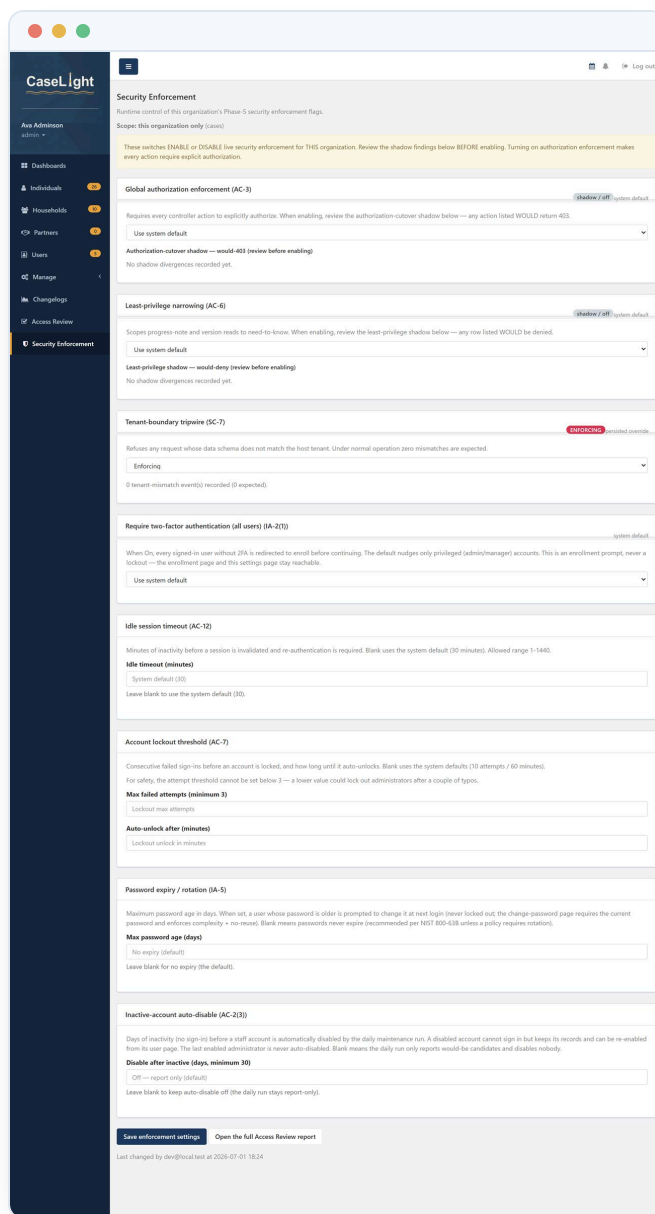

Enterprise-grade security — built in, and yours to see.

Refugee immigration status, minors' records, health and mental-health needs, government IDs. The data demands a serious posture — mapped, enforced, and visible to the administrators who own it.

Access Review – periodic recertification (AC-2).

Per-org enforcement toggles, mapped to NIST controls.

Field-level access control

AC-3 • AC-6

Forms & domains classified Standard / Restricted / Emergency-only; records mask what a role can't see.

Break-glass emergency access

AC-6(9)

One-hour self-elevation with a mandatory reason, audit written first.

Encryption at rest

SC-28

Sensitive PII encrypted across five tiers.

Audit trail, MFA & passkeys

AU-2 • IA-2

Append-only, tenant-isolated logging; TOTP + WebAuthn.

Hardened toward **NIST 800-53** Moderate

SOC 2 • Security • Confidentiality • Privacy

Aligned to the **HIPAA** Security Rule

AGPL-3.0

Honest by design: these controls are hardened at the **application layer** on synthetic pilot data. A documented production gate — managed keys, TLS in operation, tested backups, signed agreements — governs the move to real client records. The compliance package ships with the source. No security theater.

Free for the nonprofits doing the work.

Clone it, stand it up on a single box, and evaluate the fit on synthetic data. When you're ready for real records, the compliance groundwork is already written.
